Belkin Dock Utility

Enhance your network security
with free dock utility software.

Integrate Belkin Dock Utility software.

Complement your existing Belkin hubs, adapters, and docking stations with our free device utility software.

Streamline

Get the best connection and security from your Belkin dock with this free software solution.

Monitor

Supports the use of MAC address ID as a factor in your role-based network policies.

Download

Free download for Windows® and Mac® devices on [belkin.com](https://www.belkin.com).

Technology tailored to your Belkin docks.

This free dock utility software complements your existing Belkin docks, hubs, and adapters that have an Ethernet port including those with Thunderbolt™, GaN, USB-C®, DisplayLink, and Silicon Motion technology. Designed based on

customer feedback, implementing the software for your business gives you MAC address ID mirroring, network interface management, and fully automatic operation to ensure a seamless user experience.

Enhance your network security.

Implement Belkin Dock Utility software to:

Support the use of MAC address ID as a factor in your role-based network policies.

Allow MAC address ID pass-through and reset for added security.

Reduce network routing issues with WiFi auto-switch to maximize internet efficiency.

Monitor each user's devices on their Belkin docks, hubs, or adapters for improved network control and security in BYOD (bring your own device) and hot-desking environments.

Enhance the already robust features of Belkin docks.

Streamline work with support tools.

Software support includes:

MAC address ID pass-through and reset

WiFi auto-switch

Devices supported: Windows OS and macOS®

A modern office environment with large windows overlooking a city. Several people are working at desks with multiple monitors. A woman in a white top is smiling and talking to a man in a dark suit. Other people are visible in the background, some standing and some sitting at desks. The office has a bright, airy feel with natural light coming through the windows.

Maximize your docking stations' capabilities.

Integrate Belkin Dock Utility software to oversee your network.

MAC address ID mirroring supports your company's IT network security policies to any docked devices.

Allow network communications to use the same MAC address ID mirroring as your laptop via a Belkin USB-C or Thunderbolt docking station. Effectively manage clients using MAC address ID filtering or role-based network policies even when they're connected to a docking station.

Network interface management helps to ensure optimal network performance.

Temporarily disables WiFi on your laptop while you are connected to your Belkin dock, routing all network communications through the Ethernet interface. This optimizes connection speed, reduces WiFi traffic, and prevents packet routing issues.

Fully automatic operation ensures a seamless user experience.

Automatically detects when your laptop connects and disconnects from your Belkin dock, and resets to the original MAC address ID when undocked.
