

Belkin KVM Remote Control with Integrated Keyboard.

Secure. Certified. Connected.

Belkin Remote Control with Integrated Keyboard (F1DN008KBD).

The Belkin KVM Remote Control with Integrated Keyboard is designed to help declutter the operator's desk while enhancing awareness and effectiveness. The F1DN008KBD integrates an 8-port remote control with a backlit USB keyboard for Belkin's Universal 2nd Generation and Modular SKVM/SKMs.

For organizations that utilize color as an indication of the security enclave, the lighting built into the integrated keyboard mimics channel colors on the front panel of the Universal 2nd Gen Secure KVMs, providing a clear, visible reinforcement for operators as to on which enclave they are working. Combined with SKVM mounting options from Belkin, installers can remove the SKVM itself from an operator's desk while preserving switching controls, offering an optimally decluttered workspace with enhanced operator awareness.

Key features and benefits:

- **TAA Compliant**
Assembled in the USA, US-based technical support.
- **Functionality**
Works as an up to 8-port SKVM remote control and standard USB keyboard, when connected to an SKVM. Works as a standard keyboard if not used with a Belkin Secure KVM.
- **Minimize Operator Error**
Synchronize backlit LED with enclave color designation on Universal 2nd Gen Secure KVMs to inform operator and bystanders.
- **CAC and Audio freeze indicators as well as keyboard-lock lights synchronized with Universal 2nd Gen front panel.**
- **User-configurable light intensity suitable for various work environments.**
- **Decluttered Desk**
SKVM channel selection with USB keyboard minimizes components on a desk while enhancing operator awareness.
- **Compatible with Universal 2nd Generation and Modular SKVM/SKMs (2-, 4- and 8-port models)**
